

## Texas Earth Science Week 2009

### A Message from the State Geologist of Texas

Earth Science Week (ESW), an annual nationwide program designed to promote interest in and knowledge of Earth science and its contributions to society, is celebrated the second full week of October each year and is sponsored by the [American Geological Institute](#). The 2009 ESW will be celebrated nationwide the week of October 11-17.

Earth sciences bridge the gap between art and science, requiring a unique blend of observational skill, quantified ability, and creative flair for learning about our Earth and universe. Earth scientists of the past bridged the gap using maps and other familiar tools. Today, the same tools are complemented by large hardware clusters, state-of-the-art visualization technology, and complex computer programs to weave together a variety of data from within, on, and above our planet. Earth science professionals are found on K-12 and college campuses, in the mineral and energy industries, and in environmental and hydrology firms. They are astronauts, lawyers, Federal and State employees, politicians, doctors, businessmen, weathermen, museum curators, and parents. A degree in Earth sciences prepares a kid to use both sides of the brain, and it is one of the best degrees around to get ready for that thing that happens after college: life.

ESW is celebrated across the state of Texas annually. Organizers around the state have planned activities, and communities are busy organizing these events for the 2009 celebration.

- ✦ The **Austin ESW Consortium** is organizing the 10<sup>th</sup> annual career fair for 350 middle school students and an Earth science book drive.
- ✦ **UTEP and the Department of Geological Sciences** are hosting tours, activities, and lectures.
- ✦ The **Houston Geological Society** is hosting their annual Family Energy Festival and Bolivar Peninsula field trip.
- ✦ The **Trinity University Department of Geosciences** in San Antonio organized ESW photography and rock identification contests.

I encourage you to be a part of Earth Science Week by contacting your local ESW organizer or starting your own program. Visit the Texas ESW Website at [www.beg.utexas.edu/esw/](http://www.beg.utexas.edu/esw/) for more information.

Dr. Scott W. Tinker
