ELECTION 2016: PRESIDENTIAL RACE

Caucus first-timer on the fence

Ted Cruz and Donald Trump have appeal, Iowans say -- and they also have their liabilities.

By Jonathan Haidt

PONTEGRANDA, IA --まで、Cruz and Trump are on the same side of the fence. The best political man and women in the world's biggest business. Bush believes that Trump could spend the unlimited "money on" a campaign to win the presidency. A close-up of the Republican presidential candidates is displayed in the Oval Office of the White House.

JUVENILE JUSTICE AT BASE GETS SCRUTINY

Officials meet to find ways to bring younger offenders to account.

WEST POINT, N.Y. -- The military is considering a plan to bring younger offenders to account.

STATEMENT INVESTIGATES FORT HOOD

After a wild weekend, tough commute awaits

Residents of West Lake Street in Virginia, which forced buses to slow down on Sunday after a chaotic snowstorm, dumped more than 10 inches of snow in the city's most-recently built districts. Virginia's state women were told to stay home Monday due to conditions in the state's west.

EAST COAST SEVERE WINTER WEATHER

Workweek starts as transit systems remain in disarray from snowstorm.

By Michael S. Kranz and Wes Pare Decatur

NEW YORK -- After a weekend of dodging snowplows, snowboarding and playing out, the Blizzard Blanket of Eastern U.S. will confront a Monday commute of transit lines and endless rounds of snow.

INCIDENTS OF JUVENILE CRIME AT FORT HOOD

Seismic
continuing from A1

Earthquakes have long been known that humans are capable of causing earth- quakes, and have suspected that injection of wastewater was related to fracking but lacked evidence of how much was happening.

But Texas lawmakers had been able to get a sense of what was going on in papers by Fredrich and other scientists.

Last year, the state set up an office of the Texas Railroad Commission, which regulates the oil and gas industry, and said, “I don’t have a clue about what’s going on.”

A recent report from the United States Geological Survey was suspiciously silent on April that earthquake activity had sharply increased since 2009 in the central and east Texas region, including Texas, due to industrial operations.

But, the study researchers drew a link between disposal of fracturing related materi- als and an increase of quakes in the area, and state officials in Oklahoma, which had seen even more pronounced changes, said they believed their own data that there was a link, and the state has been restricting the activity.

That led the Legislature to act.

Lawmakers learned that “Texas has to take the lead” and understand the characteristics of Texas shale and the geology of our state,” said state Rep. Drew Davis, who chairs the Senate Energy and Natural Resources Committee.

The money will provide monitoring, training, and technical advice to the Legislature and governor. Both are critical when understanding and mitigating seismic activity.

"In 1972, a major earthquake in Japan shocked scientists. The new project manages forfish is able to shed light on the impact of quakes on infrastructure.

"I applaud the efforts of the Legislature and governor," said Davis. "We need to understand natural and induced seismic activity in Texas to maintain the safety and economic vitality of our state."

The project is expected to become operational in 2016 and continues through 2019.

The money will provide monitoring, training, and technical advice to the Legislature and governor. Both are critical when understanding and mitigating seismic activity.

"In 1972, a major earthquake in Japan shocked scientists. The new project manages forfish is able to shed light on the impact of quakes on infrastructure. It's a major step in understanding the impact of quakes on infrastructure.

"I applaud the efforts of the Legislature and governor," said Davis. "We need to understand natural and induced seismic activity in Texas to maintain the safety and economic vitality of our state."
