Re: Weatherford Planning to File for Bankruptcy

Keep in mind that the Permian is about an order of magnitude larger than either of the other two plays.

Point reference:

The Bureau of Economic Geology estimates the Bakken / Three forks as around 8BBO recoverable.

Current BEG estimates have the Delaware Bone Spring and Wolfcamp at 48 BBO. I recall a Similar study by the BEG puts the Midland at similar size (Wolfcamp and Spraberry).

You're looking at close to 100 MMBO in what they characterize as "currently economic" horizons. It says nothing for future potential in the Cline, atoka, etc... Or EOR
