Governor's Office, Education Resources Commission
The State of Texas

MINERAL PRODUCTION VALUES IN TEXAS SCHOOL DISTRICTS

INTRODUCTION

This investigation was initiated on January 15, 1976 when the Governor's Office, Education Resources Commission, designated the Bureau of Economic Geology as the performing agency to provide mineral production statistics for all school districts in the State of Texas.

The final report includes the identification of all mineral commodities produced in Texas school districts and the evaluation of total mineral production value for each school district, including petroleum liquids, natural gas and all other minerals. The inventory of active mineral producers and the evaluation of production and production value is based on data for the 1974 calendar year.

MINERAL PRODUCTION INVENTORY

Data provided by the U. S. Bureau of Mines and the Mining Enforcement and Safety Administration and from publications of the Bureau of Economic Geology were used to establish locations of producers of minerals other than oil and gas. Individual mineral producers were contacted in cases where specific locations of production sites were not available from other sources, were not accurately identified by the standard sources, or were located near boundary lines between school districts. County base maps with school district boundaries and a current list of Texas school districts were provided by the Governor's Office, Education Resources Commission. These base maps were used in conjunction with location data noted above to compile an accurate inventory of mineral producers in each school district.

Map and mineral inventory compilations will remain on open file at the Bureau of Economic Geology for future reference.

Oil and gas production data were compiled by the Texas Railroad Commission for each school district and submitted to the Bureau of Economic Geology for evaluation of production value.

UNIT VALUE DETERMINATIONS

In accordance with contract specifications, statewide average unit values were established for each mineral commodity.

Unit values for mineral commodities were derived primarily from the U. S. Bureau of Mines statistical data for Texas mineral production in 1974. In those cases where mineral production quantities and values were not available for specific commodities produced in Texas, the unit values were established from time-price relationships published by the U. S. Bureau of Mines in "Mineral Facts and Problems," U.S.B.M. Bulletin 667, or from market quotations published in the Engineering and Mining Journal, December, 1974, Vol. 175, no. 12.

Table I lists mineral commodities produced in the State of Texas, unit values used for determining total mineral production value, units of measure for production values, and sources of data for these values.

MINERAL PRODUCTION ESTIMATES

Specific production figures for local mineral producers are not available for general distribution by the U. S. Bureau of Mines. Therefore, estimates of production quantities were established in a series of consultations with the U. S. Bureau of Mines State liaison officer. In addition, plant size, market area, and total county

TABLE I. Mineral Commodities
Produced in Texas, with Unit Values
and Sources of Unit-Value Data

Mineral Commodity	Mineral Commodity Abbreviation	Unit Value	Source of* Unit Value Data
CLAY			
ball (unprocessed)	Ball clay	\$8.00/short ton	USBM(S)
bentonite	Bentonite	12.75/s.t.	USBM(S)
common clay & shale	Com. clay, com. clay & sh.	1.65/s.t.	USBM(S)
fire clay	Fire clay	7.70/s.t.	USBM(S)
Fuller's earth & kaolin	Fuller's earth, clay-kaolin	25.00/s.t.	MFP
COAL (lignite)	Lignite	2.25/s.t.	BEG
GYPSUM & ANHYDRITE			
calcined	Gypsum/Anhyd. (calcined)	20.68/s.t.	USBM(S)
crude	Gypsum/Anhyd.	3.87/s.t.	USBM(S)
NATURAL GAS	G.W.G.	0.311/1000 cu.ft.	USBM(S)
CONDENSATE	Cond.	6.95/barrel (bbl)	USBM(S)
CRUDE OIL	Crude	6.95/barrel (bbl)	USBM(S)
CASINGHEAD GAS	Csghd.	0.311/1000 cu.ft.	USBM(S)
SALT	Halite	4.51/s.t.	USBM(S)
SAND & GRAVEL			
construction aggregate fill	Conagg. Fill (S&G)	1.90/s.t.	USBM(S)
unprocessed aggregate	Unproc. agg.	1.35/s.t.	USBM(S)

BEG--Bureau of Economic Geology

mineral production were used as guidelines in estimating the non-oil and gas production quantities.

Oil and gas production figures for individual school districts were determined by the Texas Railroad Commission and supplied to the Bureau of Economic Geology for evaluation of unit value and total production value.

PRODUCTION VALUE CALCULATIONS

Statewide average unit values for each mineral commodity (Table I) were used in conjunction with the production estimates to determine the mineral production value for each mineral commodity in each school district in the State of Texas. These values were totaled to obtain the total mineral production value as listed in Table II. Abbreviations of mineral commodity names used in Table II are identified in Table I.

Total mineral production value is shown in two parts in Table II. A total production value for oil and gas minerals is listed separate from a total production value for all other minerals. School districts are listed by name and a six-digit code number as supplied by the Governor's Office, Education Resources Commission.

Production values calculated on the basis of statewide average unit values may vary considerably from actual values because the method does not include consideration of factors such as regional price variations, demand and transportation costs that affect unit values in local areas.
