# Project Evaluation: Phase II: Optimal Geological Environments for Carbon Dioxide Disposal in Brine-Bearing Formations (Aquifers) in the United States

GCCC Digital Publication Series #00-01

S. D. Hovorka
M. L. Romero
R. H. Trevino
A. G. Warne
W. A. Ambrose
P. R. Knox
T. A. Tremblay

Keywords:
$CO_2$ Storage- Brine Formations, Brine Formation Identification, Geographic Information System (GIS), Data Digitization and Integration, $CO_2$ Storage- Site Parameters

Cited as:
Hovorka, S. D., Romero, M. L., Treviño, R. H., Warne, A. G., Ambrose, W. A., Knox, P. R., and Tremblay, T. A., 2000, Technical summary: optimal geological environments for carbon dioxide disposal in brine-bearing formations (aquifers) in the United States: The University of Texas at Austin, Bureau of Economic Geology, final report prepared for U.S. Department of Energy, National Energy Technology Laboratory, under contract no. DE-AC26-98FT40417, 232 p. GCCC Digital Publication Series #00-01.
