Texas Bureau Breaks Ground on New Core Research Building

The Texas Bureau of Economic Geology has begun construction on its new core research building, a project that will provide state-of-the-art facilities

for scientists conducting research on cuttings and core samples in the Bureau's Austin Core Research Center.

"Everything we do is built on rocks," said Bureau director Scott W. Tinker during a groundbreaking ceremony on October 5. "It's exciting to have this new building to show what we're all about."
