

New Research Consortium Could Aid Water & Energy Collaborations

As issues at the nexus of water and energy become more pressing, UT's [Bureau of Economic Geology](#) has begun to explore a new research consortium: the Subsurface Water & Energy Laboratory (SWEL). SWEL is intended to help state agencies, industry operators, and water management companies understand the water cycle in unconventional oil and gas systems, while supporting the integration of water management and energy development. Read more about SWEL [here](#).
