Natural World Facts

Watch on

Some years ago, Madame Fast and I travelled to Kenya to drive around in Land Cruisers to view animals. The highlight was the Wildebeest Migration. Many thousands of them were huddled on one side of a river grunting and moaning while flies swarmed about them by the millions.

[Substack](#) is the home for great culture

Then, out of nowhere, it was on. It was as if someone fired a starter pistol and off they went. In one great heaving kicking, scrambling mass they ran like prisoners in a jail break. They trampled each other in their frenzy to get to the other side and up the steep bank of the river - some were dragged under by crocs - others were drowned as they were trampled and pushed below the surface by the relentless herd.

There was no stopping them. Once a few of them started to run, every last one of them followed.

The herd mentality no doubt serves a purpose however The Ministry of Truth understands herd mentality and they know how to 'fire the starter pistol' to make the herd of 8+ billion humans hoof it in the desired direction. They are artificially controlling the herd using bullets of fear (perhaps the Wildebeest run because something - real or imaginary - spooks them?).

The Ministry employed fear of death to convince the herd to inject Death Shots.

They are at this very moment invoking their good friends fear and death to prepare them to accept - no, not accept... welcome... the very hard yards ahead involving raging energy inflation. As the Wildebeest were willing to accept the hardships involved with crossing the river, so too will the billions of humans accept exploding prices for everything and enjoy cold showers and taking the bus. The alternative was death.

The thing is... I could write a thousand articles filled with facts and logic demonstrating that that both the Ukraine and Iran Wars are contrived - and provide the reasons why the Ministry of Truth is doing what they are doing. It would be no different than if I could communicate with the Wildebeest and tell them, just as they get set to join the stampede 'there is no predator - it's all fake' so no need to risk your life trying to cross the river.

Neither herd will listen. They are devoid of logic. Devoid of the ability to reason. They are like a swarm of fish moving in unison... or a flock of birds.

The Ministry of Truth knows this. And therefore they are very easily able to control billion humans.

Exceptions are few and far between. Those who understand how the Ministry of Truth controls the 8B+ morons are in possession of True Intelligence. They are not [barnyard or circus animals](#) - they do not run the second the Ministry of Truth pulls the trigger. They are suspicious. They ask questions. They demand evidence and logic. They default to assuming they are being played and they look for the obvious signals.

This Substack seeks to provide facts and logic. There are just over 1000 subscribers The World According to Fast Eddy. A great many are here only to be entertained - before they join the 8B+ in the stampede.

However there are a decent number who are here to seek the truth - who are 'aware'. Pat yourself on the back - you are a member of the elite 0.0000000000000001%.

Big Break News - Big Breaking News - Big Breaking News

I was told the other day that the reason why the US does not attack Iranian power and desalination plants is because Iran would retaliate and blow up desalination plants across the Middle East.

I did not want to outright accuse the messenger of being an idiot so I did not say - but if they do nothing Whoremooz remains closed and collapse is fait accompli. I did not want to suggest dropping atomic bombs on Iranian cities as was done in WW2 to start that war. To do nothing will result in the deaths of 8B+ (cannibalism... starvation... murder etc) so perhaps there is nothing to lose?

If the above clip is real (it most definitely is NOT) then we should be seeing million dying from thirst, disease and starvation in the coming days across the region.... cuz the All-Powerful Iranians will be blowing up all the water plants.

I'd rather have these debates with a swarm of fish - at least they don't respond with idiocy then smugly point to their degree from Princeton and ask how I could possibly know more than they do.

What does the U.S. Shale Oil Industry look like in 5 years

Replying to srsroccoreport

Mike Shellman

Oh Lord, I hate making predictions.

In five years, I envision total shale oil production in the U.S., now about 9.3 MM BOPD from four major basins and 4 minor ones, to be **less than 7.5 MM BOPD** falling. That is providing there is enough frac source water in the Permian to last 5 years and the sector can find new places to inject its produced water. The Permian is the only source of growth left, and it is a toss-up as to what gets it first...pressure depletion, lack of source water and/or too much produced water and no place to put it.

Short of \$130 WTI and \$8 natgas, sustained, HZ oil rigs will be less than half what there are now.

Exports will be stopped, I hope, and the U.S. will actually be refining its remaining tight oil resources for its own use. The AI/LNG hype will be done for lack of associated gas from shale oil plays, something that is now grossly over exaggerated. Haynesville will be in steep decline as will, likely, the APP Basin. What natgas we have left will stay in America, for Americans. More of it will be used for transportation fuels and to generate electricity.

Both shale oil and shale gas in these major basins will be managed by no more than 10-12 corporations because of consolidations and those corporations will be up with \$300B in debt.

The rest of the world will be in deep doo-doo.

In five years, most Americans with a square centimeter of cranial capacity will look back on the shale phenomena and be able to say, *man, I wish we had handled all this better*. We should have focused more on pressure maintenance, increasing recovery rates and not exported all of our nation's future energy security to foreign countries. All that API BS about U.S. "allies" was a lie. Oh wait, it already IS a lie, sorry.

[Oilystuff Blog](#)

Mike Shellman was *literally* born in the oilfields of S. Texas. He started tailing sucker rods when he six years old, learned to throw a spinning chain by the time he was 12 and became a driller on 1500 HP rigs by 20. He's done just about everything there is to do in the oilfield, from ditch digging to deep well design and implementation. He has operated as many as 90 wells in the past and owned various non-operated WI and royalty interests throughout Texas, including tight oil wells.

He still drills wells every year, based on his geology, with his own money. His operational company was one of the first in the industry to render produced water reusable and beneficial to the environment under Environmental Protection Agency and Texas Railroad Commission compliance standards he helped draft, implement. Mike is a published writer, a published photographer and belongs to the Society of Petroleum Engineers, the American Association of Petroleum Geologists, the South Texas Geological Society, the Produced Water Society and is a past member of the Association For the Study of Peak Oil.

What if Mike is wrong?

What if the time frame for a major drop off in production is 3 years - or 2 years

next year? As we know, conventional oil peaked in 2005 and shale has been the growing source of oil and gas since. When shale tips over, the global economy descends into a serious energy deficit and prices will explode higher - and collapse quickly follow.

Mike would not have access to the same info as the Men Who Run the World. Are you looking at dire numbers? And what about Saudi Arabia - their oil reserves are a black box. Nobody without top secret clearance gets to see that data.

Riot Control

If we are only a few years or less from an energy production cliff, would it not make sense to fake a war, and use that to justify rationing what remains? Rationing for some time in terms of providing just enough oxygen to BAU's brain to allow it to operate the body - however this deprivation will eventually result in the death of BAU.

Hopefully blaming the dire situation we are about to face on a 'temporary war' will result in mass riots. Because if the barnyard animals lose their shit and tire of no showers, two shitty meals per day, and taking the bus, all bets are off. The situation could quickly spiral out of control.

[International Energy Agency Pushes Rationing](#)

The International Energy Agency in Paris has released a new and urgent document that it wishes all nations with energy struggles to adopt. Many are doing that now.

[America's Biggest Oil Field Is Turning Into a Pressure Cooker - WSJ](#)

If you can't open the link the article discusses the rising pressures at the Texas injection sites. It gives quotes where folks are citing the rising # of problems and the increasing costs.

Excerpt: Shale drillers have turned the biggest oil field in the U.S. into a pressure cooker that is literally bursting at the seams.

Producers in the Permian Basin of West Texas and New Mexico extract roughly half the U.S.'s crude. They also produce copious amounts of toxic, salty water, which they [pump back into the ground](#). Now, some of the reservoirs that collect the fluids are overflowing—and the producers keep injecting more.

It is creating a huge mess.

A buildup in pressure across the region is propelling wastewater up ancient wellbores, birthing geysers that can cost millions of dollars to clean up. Companies are wrestling with drilling hazards that make it more costly to operate and complaining that the wastewater is creeping into their oil-and-gas reservoirs. Communities friendly to oil and gas are growing worried about injection.

“It’s one of the many things that keep me up at night,” said Greg Perrin, general manager of the groundwater-conservation district in Reeves County, Texas, where companies are injecting some of the largest volumes of wastewater.

Swaths of the Permian appear to be on the verge of geological malfunction. Pressure in the injection reservoirs in a prime portion of the basin runs as high as 0.7 pound per square inch per foot, according to a Wall Street Journal analysis of data from researchers at the University of Texas at Austin’s Bureau of Economic Geology.

When pressure exceeds 0.5 pound per square inch per foot, the liquid—if it finds a pathway—can flow to the surface and pose a risk to underground sources of drinking water, Texas regulators have said in industry presentations.

[**No Shortages or Panic Buying in Australia**](#)

The price of diesel in the remote Northern Territory is roughly [the same](#) as in Perth.

and stations are open for business. The closer we get to using up the less than 3 weeks of reserves, the lower the price of diesel falls. It was closer to \$3.65 on the weekend. Idiocracy rules!

Some are suggesting this is 'demand destruction.' If so then that would mean empty shelves in the supermarkets and shops because diesel is what fills those shelves.

Given we are told we have less than 3 weeks of diesel what one would expect is for diesel reliant industries such as mining and farming to be **HOARDING** diesel - driving the price up.

Can anyone point to where diesel jerry cans are ['out of stock'](#) at Bunnings?

If there is demand destruction, then why are mining shares rising the closer we get to D Day? Mining uses a hell of a lot of diesel... and there will be none in less than 3 weeks. Mining stock values should be collapsing. No diesel - no mining.

ASX 200 materials led the market sectors last week, rising 4.6% as mining shares began recovering from this month's sell-off.

And finally, I understand that the 'war' with Iran is all about destroying their nuclear program. Surely given the US and Israel have total air superiority they could have bombed the program into the stone age within hours... But nope. They prefer not to and instead allow this to drag on ... and on... and on...

Reminds me of the 'war' in Ukraine. Russia could put the country into the dark age within a few hours by obliterating their power plants - but they choose not to.

That is because the Ukraine and Iran fake wars are all about providing cover for the fact that we are running low on oil and gas - and they need to blame the high prices and rationing on a temporary situation that will 'soon be resolved.'

Telling 8B+ barnyard animals that we are running out of energy would make them realize that they'll soon be dead. And that would set off a calamity that would prematurely end BAU.

♥ Liked by Fast Eddy

Yesterday I posted a new study on Gails blog about overshoot. The authors argued the earth need depopulate by 78% to create comfortable living conditions for nearly everyone. Like 2.3 billion p give or take.
